

## One Touch Can Opener

Company: Daka Development Limited

Designer: Pat Mah

Equipped with a patented cutting technology, the One Touch Can Opener offers an easy, clean, safe, and most importantly, 100% hands-free service.

The Opener does not require one single hole to operate and one touch of the auto-start button will kick start a 360° lid-opening motion. The whole lid will be lifted off by the specially-designed integrated magnet and both the edges on the lid and can top are blunted. The cordless design hardly takes up any storage space in the kitchen and two AA batteries are good enough for opening up to 100 round-shaped cans.

Originally designed for the elderly, arthritics, and people with special needs, the Opener has now revolutionised a piece of long-lived but unremarkable kitchen gadget.
